Subject: EPA Statement on Work being performed at the Former FMC Site in Fort Hall, Idaho

“EPA has no information from either its own project managers, FMC or the Kase-Warbonnet contractors on site, to support the Sho-Ban tribe’s site safety concerns regarding the removal of drummed waste. EPA takes pride in its site safety record at this site and works diligently with the Tribe, FMC and its contractors to craft and follow detailed site safety plans. These plans are designed to ensure the safety and well-being of site workers, monitoring personnel and the greater Fort Hall Community. As the 2016 construction season kicks-off and more progress is achieved at the site, EPA’s focus on site air monitoring and general safe operations remains constant. We look forward to continuing to work closely with the Tribe and FMC to reduce health risks and prepare the land for future productive use.”
